BALANCE

Maintain both security and usability without compromise

Can You Control Access?

Securing sensitive data is crucial. At the same time, enterprises must ensure that users have access to the assets they need, and must adopt the latest technologies that let them balance access with security. Plus, with employee and customer engagement spreading across all platforms, users demand anytime, anywhere access from their desktops, mobile devices, and cloud systems.

To meet these standards, a successful organization embraces advanced access management strategies, including:

- ▶ Multi-factor authentication.
- ▶ Single sign-on.
- ▶ Identity federation.
- ▶ Integrated access management.
- ▶ Risk-based access control.

Implementing these strategies increases employee efficiency without compromising on security. However, they can come with challenges and difficulties that not all organizations are equipped to approach. Your business needs the right partner to help put secure policies in place.

Simplify Access Management with the Right Solution Partner

Prolifics has the expertise needed to tackle the access management challenges that are specific to your company. In our Web, Mobile, and Cloud Access Management Quick Start, our security experts meet with your stakeholders to plan out ways you can:

- ▶ Secure mobile, cloud, and social interactions.
- ▶ Identify and prevent security threats and identity fraud attempts.
- ▶ Simplify and streamline cloud integration and identity silos.
- ▶ Balance security with usability by managing access across platforms.
- ▶ Use multi-factor authentication and single sign-on to create secure and easy access to assets and resources.
- ▶ Understand and manage risk.
